Curation System

THE GOALS

Explore Home is curated.

- Conduct quality gate — low-quality content gets blocked in curation system
- Freshness or engagement signals in display order
- Admin controls to highlight or suppress content
- New creators see their content surface in Explore

WHAT WE'RE DEVELOPING

- 4 ranked content rails: Trending MV, New MVs, Top Picks Songs, New Songs
- AI-assisted content review on publish (NSFW, audio quality, copyright)
- Human moderation queue with approve / reject / override controls
- Admin manual pin/unpin for trending overrides

4 CONTENT RAILS

The Explore Home surfaces content across four independently ranked rails. Each rail has its own scoring logic, eligibility rules, and refresh cadence.

Trending MV

Refresh: Every 6h · 10-card carousel (auto-advance)

New MVs

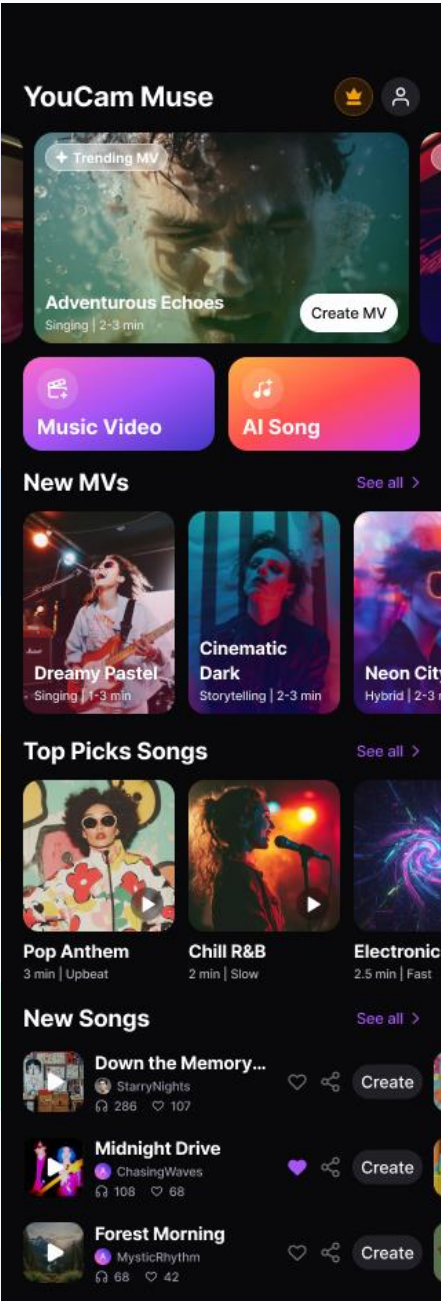

Refresh: Every 1h · 20-card carousel

Top Picks Songs

Refresh: Every 6h · 20-card carousel

New Songs

Refresh: Every 1h · 15 item list

SCORING SIGNALS

Ranks MV by recent engagement using a weighted score over a rolling 7-day window. Refreshed every 6 hours. Targets the Trending MV carousel — the first section users see on Explore Home.

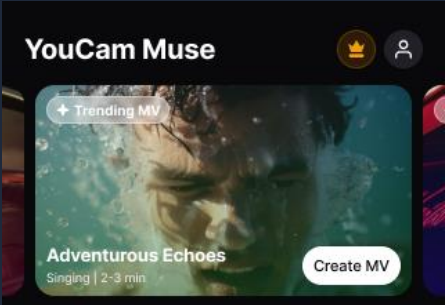

Signal	Weight	Notes
Play count (7-day rolling window)	45%	Most direct signal of current interest
Like count (7-day rolling window)	30%	Intent signal: user chose to engage
Share count (7-day rolling window)	15%	High-intent: user sent to another person
Video completion rate	10%	Quality signal: viewers watch to the end

$$\text{TrendScore} = 0.35 \times \text{plays7d} + 0.25 \times \text{likes7d} + 0.15 \times \text{shares7d} + 0.10 \times \text{completionRate}$$

ELIGIBILITY RULES

- MV status = published & approved (no active moderation flags)
- Approved time (AI or human) within last 30 days (prevents old viral content monopolising)
- Minimum 10 plays (avoids brand-new content with 0 signals)
- Creator account in good standing (not suspended or flagged) via backend banned

REFRESH	Every 6 hours via scheduled job
DISPLAY	10-card horizontal carousel · Auto-advances every 5s
COUNT	Top 10 displayed in carousel rotation
DUPLICATION	Same creator appears at most once in top 3 displayed cards

SCORING SIGNALS

Surfaces the most recently published and approved music videos. Ordered primarily by recency. Uses a 2-column masonry grid with pagination. Tapping any card enters MV Video Player in community feed mode.

Signal	Weight	Notes
published_at timestamp	Primary	Main sort key — newest first
Moderation status = approved	Gate	Hard gate: must pass AI + human review
Active moderation flag	Gate	Any active flag disqualifies the item

ORDER BY published_at DESC WHERE status='approved' AND active_flags = 0

ELIGIBILITY RULES

- MV status = published & approved
- No active moderation flags
- Content not suppressed or removed by admin

REFRESH

Every 1 hour via scheduled job: rail updates on each new approved publish event

DISPLAY

2-column masonry grid · Horizontal scroll · 20 items in Explore page

COUNT

Load 10 items; fetch next 10 at 50% scroll

New MVs

See all >

Dreamy Pastel

Singing | 1-3 min

Cinematic Dark

Storytelling | 2-3 min

Neon City

Hybrid | 2-3 min

SCORING SIGNALS

Curates the best AI-generated songs based on all-time engagement and editorial picks. Refreshed daily. Displayed as a horizontal list with album art, title, genre, and duration. Tapping a row opens the Song Player.

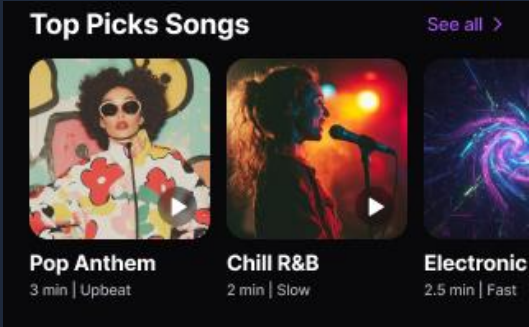

Signal	Weight	Notes
Play count (7-day rolling window)	60%	Total listens across all time
Like count (7-day rolling window)	40%	User explicit approval signal

TopPickScore = 0.30×totalPlays + 0.25×totalLikes

ELIGIBILITY RULES

- Song status = published & approved (no active flags)
- Minimum 5 total plays (quality signal gate)
- Creator account in good standing
- Approved time (AI or human) within last 30 days (prevents old viral content monopolising)

REFRESH	Every 6 hours via scheduled job
DISPLAY	Horizontal list · Album art + title + genre + duration
COUNT	Top 50 computed; top 20 displayed · 'See All' → Infinite scroll of Top 50 Picks Songs
DEDUP	Same creator capped at 3 songs in top 20 visible rows

SCORING SIGNALS

Surfaces recently published approved AI-generated songs. Parallel to New MVs — ordered by recency. Displayed as a vertical list. Tapping a row opens the Song Player in community playlist mode.

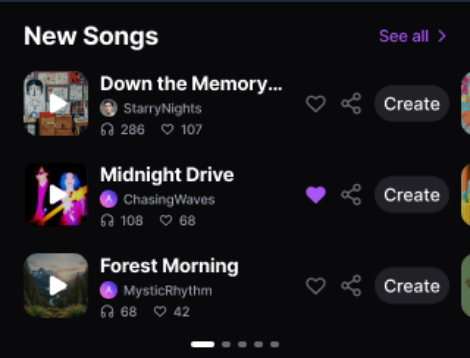

Signal	Weight	Notes
published_at timestamp	Primary	Main sort key — newest first
Moderation status = approved	Gate	Hard gate: must pass review
Active moderation flag	Gate	Any active flag disqualifies

ORDER BY published_at DESC WHERE status='approved' AND active flags = 0

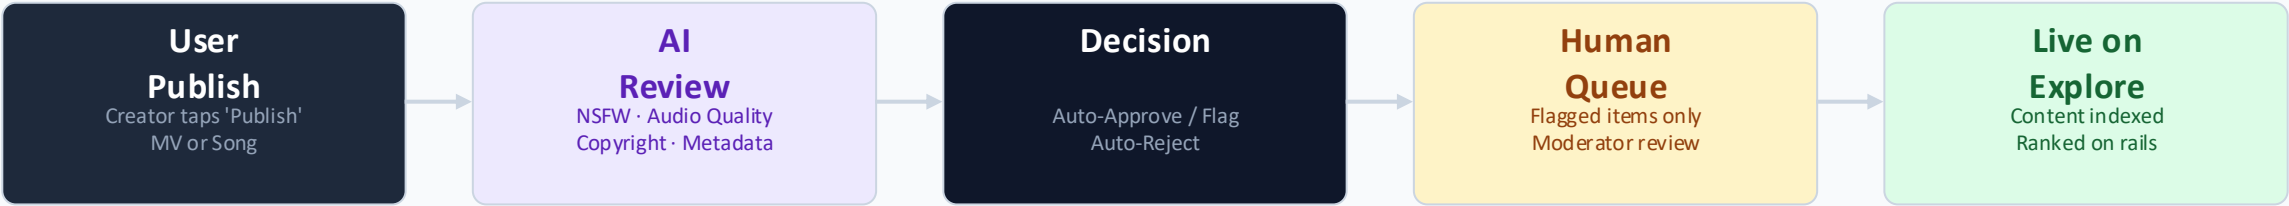

ELIGIBILITY RULES

- Song status = published & approved
- No active moderation flags
- Not suppressed or removed by admin

- REFRESH
- Every 1 hour via scheduled job: rail updates on each new approved publish event
- DISPLAY
- 3 vertical list per column * 5 columns · Album art + title + play count + like count
- COUNT
- Load 3 column of items; fetch next 2 column at 2nd page scroll · 'See All' links to full grid

3-LAYER PIPELINE: EVERY PUBLISH TRIGGERS FULL REVIEW BEFORE CONTENT GOES LIVE

AI Review Layer

- NSFW image/video frame detection
- Audio quality score (distortion, silence)
- Copyright audio check

Human Review Queue

- Only flagged content enters the queue
- Moderators see AI flags + confidence scores
- Actions: Approve · Reject · Reinstate
- Manual pin/unpin OPS content on any content rail
- Force-approve or force-reject any item
- Full audit log of all admin actions

✓ IN SCOPE (Sept MVP)

- ✓ **Content Rails** Trending MV, New MVs, Top Picks Songs, New Songs — all 4 live
- ✓ **Scoring v1** Rule-based scoring (no ML model). Weights configurable by admin.
- ✓ **Rail Refresh** Trending: 6h cron. New MVs/Songs: real-time on publish. Top Picks: daily.
- ✓ **Eligibility Gates** Status = approved, no active flags, minimum quality score
- ✓ **AI Review** NSFW + audio quality + copyright fingerprint + metadata validation
- ✓ **Human Queue** Basic queue UI with Approve / Reject / Escalate actions
- ✓ **Admin Override** Manual pin/unpin on Trending rail. Force-approve/reject any item.
- ✓ **Audit Log** All moderation actions logged with actor + timestamp
- ✓ **Creator Notification** Push + email on Reject with reason code

✗ OUT OF SCOPE (Post-MVP)

- ✗ **Personalized Feed** User-specific ranking based on individual play history — post v1
- ✗ **ML Recommendation** Collaborative filtering or embedding model — Phase 2
- ✗ **Creator Analytics** Dashboard showing how content performs on each rail
- ✗ **Geo / Language Filter** Country or language-specific Trending rails
- ✗ **A/B Testing Framework** Controlled experiments on ranking weight variations
- ✗ **Trending Notifications** Push alerts when user's content enters Trending rail
- ✗ **Community Reporting** User-submitted 'Report content' button in Explore
- ✗ **Song Lyrics Moderation** AI review of AI-generated lyrics for harmful content
- ✗ **Verified Creator Badge** Manual curation tier with boosted score for top creators
- ✗ **External Content** Ingesting third-party content (eg. partner MVs) to Explore
